Test Dome Live Walls

June 18, 2019

Overview

The sick building syndrome can be cured with NASA's technologies for VOC pollutant removal and el-nina stabilization. We need a test property as a testing address for the efficacy of NASA's recommendations using live plant walls with the suggested epiphytic species, using active fans and aeroponics in polystyrene base, with active automated, alexa controlled greenhouse technology from Arrow.

The plants incorporate the Mother Philodendrons and the sacred Bodhi plants for a sacred space, to be used for meditation on pasture sod with dwarf wildflowers.

The Test House will initially be a test center for the efficacy of the live walls in eliminating the Sick Building Syndrome. The actual test plan will be published later.

Milestones

1. Measurement of roof and replacement with a steel framework with solar glass.
2. Addition of Live walls with a Miyawaki plant density distribution for naturalness.
3. Creation of natural genome variants of the plant species recommended.
4. Smart home with the four daemons of Compassion, Gratitude, Optimism and Humility.
5. Learning By forgetting.
6. Practical Shambhala.

7. The Shambhala Warrior and Bon way, by [Karmê Chöling | Shambhala Meditation Center](#)
8. The Earth Protector Circle.
